Re: Green Township Fire Station #55  
Cincinnati, Ohio

Dear Stuart:

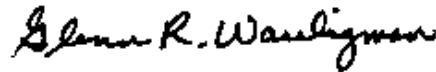

It takes time to write a letter of recommendation for a company and I don't write many. In your case I feel this is justifiable.

You supplied the cold-formed metal truss material for our 10,000 square foot fire station in Cincinnati, Ohio. The shop drawings process was done very professionally and accurate. The installer in the field had no problems with installation. The metal deck went down on top of your trusses without a hitch either.

I have attached a picture to show that this was not your basic rectangular building however as you can see this had five to six different roof elevations that tie into each other.

Thank you for the fine work you did to complete this successful project for us.

Sincerely,

Glenn R. Wauligman  
President
